

CNC precision turning specialists

Dear Sir/Madam,

Qualiturn Products Limited is very aware of the regulations that came into force on the 1st July 2006.

Qualiturn Products Limited is a subcontract engineering business, we offer a service to our customer to produce precision turned parts.

All of these parts are produced to a customer's specification, stated clearly on their drawing. Including material spec, plating spec and packaging.

Suppliers of materials to us will supply material specification sheets showing the make up of the material and various elements contained. These are known as Certificates of Conformity (CofC). Some suppliers will charge for this service.

Any customer would have to make sure that the material stated on the drawing is compliant with, i.e. RoHS, WEEE, BS EN12164.

RoHS Directive 2002/95/EC

The restriction of the use of certain hazardous substances in electrical and electronic equipment+

In order to comply with the EU ROHS legislation all of these substances must either be removed, or must be reduced to within maximum permitted concentrations, in any products containing electrical or electronic components that will be sold within the European Union.

I have also included the environmental policy statement from our business policy manual; this states what Qualiturn is doing to help currently and how we are going to help in the future.

If you wish for any more information from us please feel free to contact us again.

Yours faithfully,

Nick Groom
